COLOR SELECTION

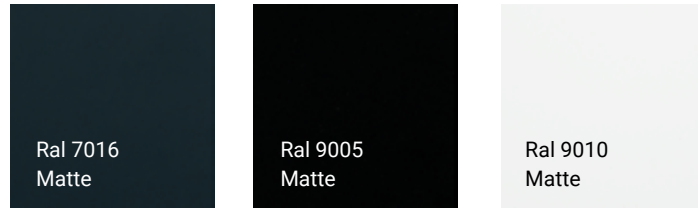

01 LACQUERED

LACQUERED FINISHINGS

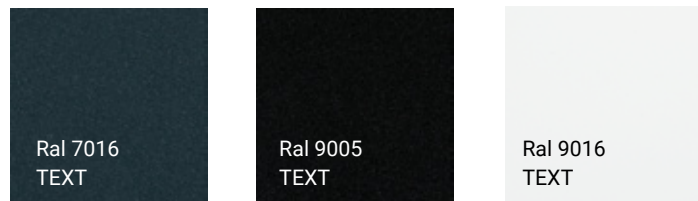

Lacquering, in addition to protecting aluminum from natural corrosion, allows you to get a huge variety of colours. In order to meet the most demanding needs of our customers, we offer a selection of HYLINÉ colours with finishings ranging from textured ral lacquers, mattes or special textured lacquers.

LACQUERED

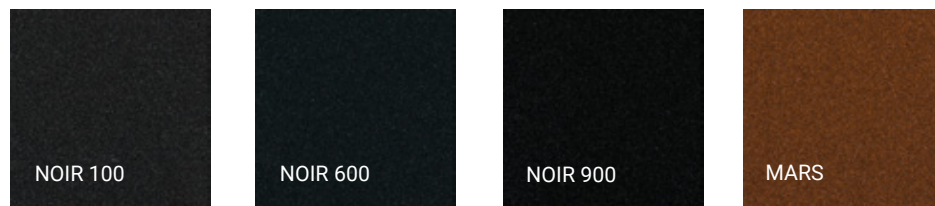

Matte

Textured

Noir

ANODIZING

Electrolytic process that forms an oxide of a determined thickness on the aluminum alloy. In terms of surface decoration of aluminum profiles, as a rule, a satin finish with the possibility of applying an extra mechanical treatment:

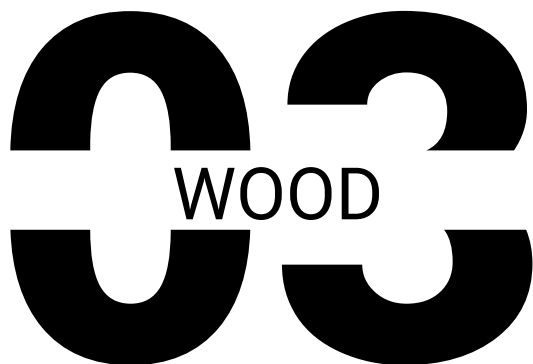

- *Polished, brushed or repolished* (result of mechanical treatment)
- *Satin* (the result of a chemical treatment).

This process offers architecture not only the natural colour of aluminum but also a range of colours achieved with electrolytic colouring, ranging from champagne to black, passing through to bronze.

TYPE OF WOOD

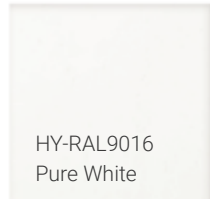

If we are looking for a wooden window, the market offers us several options of large sections and therefore "not" minimalist. With the evolution of architecture and the introduction of new space concepts, the demand for a "hybrid" minimalist window grew, and allows the creation of different finishes inside and outside, merging lacquered with natural Accoya wood, associated with the advantages of our windows in aluminum.

Produced in the most sustainable forests, Accoya wood is the star of our product. This wood is selected based on very strict criteria and subjected to an avant-garde acetylation process that gives it more resistance to external factors over the years.

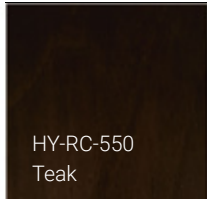

Displayed colours are for guidance only and cannot be used as proof of a colour. If necessary, request a real sample.

Being an organic material, wood may present slight variations in roughness, grain texture, and shades that differ slightly from the representative commercial images presented in this and other communication mediums.
